

Kevin Phelan is the Chief Revenue Officer at Aira Tech Corp, a pioneering company that integrates Artificial Intelligence and Augmented Reality with wearable technologies to provide real-time visual assistance to the 300 million blind and low-vision individuals worldwide. In this role, he has been instrumental in forging partnerships with some of the world’s largest companies—including Walmart, Amazon, Procter & Gamble, JPMorgan Chase, and Microsoft—to drive accessibility and inclusive innovation.

With a career spanning emerging technology, digital strategy, and corporate social responsibility, Phelan has worked with global brands such as Guinness, Red Bull, and EA Sports. He also spent a decade at the forefront of future technologies with companies like Evolv Technology, backed by Bill Gates, and CyPhy Works, which executed the first drone delivery in the United States.

Phelan is a recognized thought leader on the intersection of technology, inclusion, and the longevity economy. He has contributed to The New York Times, Forbes, and The Wall Street Journal, offering insights on how emerging innovations shape accessibility, aging, and corporate responsibility. He is particularly focused on how technology can empower older adults, extend workforce participation, and enhance quality of life for aging populations.

He resides in Portland, Maine, and is a lifelong Red Sox fan.
